

### **Is my drinking water safe?**

Yes, our water meets all of EPA's health standards. We have conducted numerous tests for over 80 contaminants that may be in drinking water. As you'll see in the chart on the back, we detected only 9 of these contaminants. We found all of these contaminants at safe levels, well below EPA's requirements.

### **What is the source of my water?**

Your water, surface water, comes from Piney River, Cumberland River and Turnbull Creek. Our goal is to protect our water from contaminants, and we are working with the State to determine the vulnerability of our water supply to contamination. The Tennessee Department of Environment & Conservation (TDEC) has prepared a source water assessment program (SWAP) report for the untreated water sources serving this water system. The SWAP report assesses the susceptibility of untreated water sources to potential contamination. To ensure safe drinking water, all public water systems treat & routinely test their water. Water sources have been rated as reasonably susceptible, moderately susceptible, or slightly susceptible, based on geologic factors and human activities in the vicinity of the water source. The WADC water system sources were rated as reasonably susceptible to potential contamination. An explanation of Tennessee's Source Water Assessment Program, the Source Water Assessment Summaries, susceptibility scorings and the overall TDEC report is available online at: [www.state.tn.us/environment/dws/dwassess.php](http://www.state.tn.us/environment/dws/dwassess.php), or you may contact WADC to obtain copies of specific assessments. A source water assessment will be developed and available for review at our office after completion.

### **Why are there contaminants in my water?**

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. Community water systems are required to disclose the detection of contaminants; however, bottled water companies are not required to comply with this regulation. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline (800-426-4791). For more information about your drinking water, please call Sandra Dudley at 441-4188.

**Este informe contiene información muy importante. Tradúscalo o hable con alguien que lo entienda bien.**

### **How can I get involved?**

Our Board of Commissioners meets on the second Monday of each month at 7:00 pm at our main office, 121 South Main St in Dickson. The public is welcome to participate in these meetings.

### **Is our water system meeting other rules that govern our operations?**

The State and EPA require us to test and report on our water on a regular basis to ensure its safety. We have met all of these requirements. Results of unregulated contaminant analyses are available upon request. We want you to know that we strictly follow all the rules.

### **Other Information**

Due to all water containing dissolved contaminants, occasionally your water may exhibit slight discoloration. We strive to maintain the standards to prevent this. At WADC, we work around the clock to provide the highest quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

### **Do I Need To Take Special Precautions?**

Some people may be more vulnerable than the general population to contaminants in drinking water. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have had organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about not only their drinking water, but food preparation, personal hygiene, and precautions in handling infants and pets from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbiological contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

### **Water System Security**

Following the events of September 2001, we realize that our customers are concerned about the security of their drinking water. We urge the public to report any suspicious activities near any utility facilities, including treatment plants, tanks, fire hydrants, etc. to (615)441-4188 or (615)441-9511.

## What does this chart mean?

- **MCLG** - Maximum Contaminant Level Goal, or the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.
- **MCL** - Maximum Contaminant Level, or the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology. To understand the possible health effects described for many regulated constituents, a person would have to drink 2 liters of water every day at the MCL level for a lifetime to have a one-in-a-million chance of having the described health effect.
- **MRDL** - Maximum Residual Disinfectant Level or MRDL: The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for the control of microbial contaminants.
- **MRDLG** - Maximum residual disinfectant level goal. The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.
- **AL** - Action Level, or the concentration of a contaminant which, when exceeded, triggers treatment or other requirements which a water system must follow.
- **Non-Detects (ND)** - laboratory analysis indicates that the contaminant is not present.
- **Parts per million (ppm) or Milligrams per liter (mg/L)** – explained as a relation to time and money as one part per million corresponds to one minute in two years or a single penny in \$10,000.
- **Parts per billion (ppb) or Micrograms per liter (µg/L)** - explained as a relation to time and money as one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.
- **Millirems per year (mrem/yr)** - measure of radiation absorbed by the body.
- **Nephelometric Turbidity Unit (NTU)** - nephelometric turbidity unit is a measure of the clarity of water. Turbidity in excess of 5 NTU is just noticeable to the average person.
- **TT** - Treatment Technique, or a required process intended to reduce the level of a contaminant in drinking water.

Contaminant	Violation Yes/No	Level Detected	Range of Detections	Date of Sample	Unit Measurement	MCLG	MCL	Likely Source of Contamination
Total Coliform Bacteria	No	0		2005		0	<2 positive samples	Naturally present in the environment
Turbidity <sup>1</sup>	No	.12		2005	NTU	n/a	TT	Soil runoff
Copper	No	.40		2005	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
Fluoride	No	1.43	.02-1.43	2005	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
Chlorine	No	2.81	.06 -2.81	2005	ppm	MRDLG 4	MRDL 4	Water additive used to control microbes
Lead <sup>2</sup>	No	1.5		2005	ppb	0	AL=15	Corrosion of household plumbing systems, erosion of natural deposits
Sodium	No	9.9		2005	ppm	N/A	N/A	Erosion of natural deposits; used in water treatment
TTHM <sup>6</sup> [Total trihalomethanes]	No	37 AVE	11-100ppb	2005	ppb	n/a	80	By-product of drinking water chlorination
Haloacetic Acids [HAA5]	No	39 AVE	13- 61ppb	2005	ppb	n/a	60	By-product of drinking water chlorination
Total Organic Carbon [T.O.C.] <sup>3</sup>	No	1.6	BDL-1.6ppm	2005	ppm	n/a	TT	Naturally present

AVE = AVERAGE

<sup>1</sup>100% of our samples were below the permitted turbidity limit.

<sup>2</sup>During the most recent round of lead and copper testing, 0 out of 33 households sampled contained concentrations exceeding the action level.

<sup>3</sup>Proper treatment techniques were used during the year 2005 to achieve adequate T.O.C. results.
